Hi Mark,

That is good news as you have actually analyzed PFECAs. Have a look at our first draft and let us know if there are areas where you can improve and contribute. ES&T were positive as I said before. They wanted us to cut out some self-citations so that we're more balanced. They also wanted us to include at least one prominent US author. If you have problems with our measure then let us know as well. ES&T want us to provide a balanced view.

Best regards,  
Ian

I am glad to be a co-author and am not prevented for participating. I think the only speed bump would be if any policy implication statements were made in the paper that the EPA doesn't like. I am glad to contribute where I can.

Mark

Dear Mark, Chris and Graham,

Zhanyun Wang and I recently contacted ES&T to ask them about the possibility of publishing a Feature Article about "fluorinated alternatives". After reading our draft, David Sedlak (Editor in Chief) and Ariel Grostern (Managing Editor) were positive to this idea, but would like us to include some North American coauthors. They are concerned about the Feature being perceived as European-centric. Your names came to mind because of your research in this field or related areas. Would any of you be interested in coauthoring? Maybe you are not allowed, Mark, because of government rules or is it ok if you include a disclaimer? If you are interested then we could send you a draft of the article and some ideas to where you could contribute. If you are not willing to be, or cannot be, a coauthor could you possibly think of any other North Americans who might be interested? Of course you can even change your mind about being a coauthor after reading the draft!

Best regards,  
Ian
